CMRP TRAINING AND WORKSHOP

This 4-day training covers the breadth of knowledge in maintenance and reliability as defined by the SMRP (Society for Maintenance and Reliability Professionals) and offers a good balance between theoretical courses and practical workshops.

*At our
Partner Office*

*At Your
Location*

Objective

The participant will gain an in-depth understanding of reliability and maintenance management, as well as asset performance. They will also learn how best practices can be applied. The participant will be able to compare his skills with world class standards.

Target audience

Engineers, technicians, reliability specialists, supervisors, planners, maintenance managers, production managers, plant managers

Duration

4 days

Syllabus

- Creation and implementation of an efficient strategic plan & performance measurement
- Environmental and safety risk management
- Communication with different actors
- Change management of processes and equipment, in accordance with laws and world class standards
- Development of the organizational structure
- Work identification, validation and approval
- Prioritization, planning, scheduling and execution of work
- Establish a reliability plan for new and existing equipment with cost justification
- Documentation, analysis, follow-up of the work and performance measurement
- Effective use of information technologies

|| *The training opened my eyes to the importance of reliability in all areas. Every lesson was a step closer to operational excellence and peace of mind.*
